

NAET AUTISM STUDY

Autism is a neurological disorder that is sweeping through the world at an alarming rate, currently affecting as many as 1 in every 68 children, according to 2010 statistics. In 2000, the ratio was 1 in 150. ***That's a 45% increase in 10 years. At this rate, in the next 10 years, the statistics will rise to 1 in every 30 children, and 10 years after that, 1 in every 14.***

There is no medication that can cure Autism, and the medications that are currently in force to curb some of the symptoms have side effects such as seizures, addiction, anxiety, hallucinations, depression, infections, paranoia, and high blood pressure, to name just a few. This is clearly not the answer!

NAET (Nambudripad's Allergy Elimination Technique), is a safe and effective holistic technique that has been proven in a 2005 study to cure this devastating disorder. ***Roughly 88% of the treated children had their autism diagnosis removed by their own individual doctors and neurologists.*** To learn more about NAET or to view the entire study, please visit <https://www.naet.com>.

The NAR Foundation (Nambudripad Allergy Research Foundation) is about to conduct a global study on NAET's effectiveness in the treatment of autism on 1000-1200 autistic patients. ***We need to present NAET's effectiveness to the global community, restore the health of autistic children, and stop the progression of this devastating epidemic.***

WE NEED YOUR HELP TO FUND THIS STUDY.
